

Optimize the value of your products with our anticorrosion tests

Assess the true effectiveness of your formulations to ensure long-lasting protection of your metal components

Advanced corrosion testing solutions

Our **expertise** covers:

An **extensive portfolio** of metals, from steel to non-ferrous alloys
Products including lubricants, antifreeze, greases, and waxes

Why it **matters**?

Because only **rigorous** testing reveals how much damage your formulations can trigger and ensures **durability** under real-world stress

We offer several **anticorrosion tests**, including the following:

Dynamic Corrosion Test:

Reproduction of extreme conditions for antifreeze, with continuous fluid circulation and cavitation phenomena

Salt Spray Test:

Simulation of severe marine environments for greases and waxes, to verify resistance under the most challenging conditions
